IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (currently amended) An intraocular lens for surgical implantation into a mammalian eye having a deformable lens body including an optically clear material comprising:

a silicone polymer; and

a silica reinforcer present in an amount effective to reinforce said polymer, the silica reinforcer including at least <u>one</u> aryl group effective to increase the refractive index of the silica reinforcer relative to a similar silica reinforcer without at least one aryl group.

- 2. (original) The intraocular lens of claim 1 wherein the silicone polymer includes aryl groups.
- 3. (original) The intraocular lens of claim 1 wherein the silicone polymer is a crosslinked polysiloxane.
- 4. (original) The intraocular lens of claim 1 wherein the silica reinforcer has a refractive index of above about 1.46 or higher.
- 5. (original) The intraocular lens of claim 1 wherein the silicone polymer is a crosslinked copolymer of (1) at least one polysiloxane including aryl groups and (2) at least one crosslinker component.
- 6. (canceled)
- 7. (original) The intraocular lens of claim 2 wherein said aryl groups are selected from the class consisting of phenyl, substituted phenyl groups, styryl, substituted styryl groups and mixtures thereof.
- 8. (original) The intraocular lens of claim 1 wherein the silica reinforcer includes covalently bonded silicone-containing moieties including at least one aryl group.
- 9. (currently amended) The intraocular lens of claim <u>8</u> [[3]] wherein the moieties include 1 to 3 aryl groups per silicone atom.
- 10. (currently amended) The intraocular lens of claim 5 wherein the at least one polysiloxane has the formula:

$$R^{3} \xrightarrow{R} O \xrightarrow{R^{1}} C \xrightarrow{R^{1}} O \xrightarrow{R} G$$

$$R^{3} \xrightarrow{R} O \xrightarrow{R^{1}} C \xrightarrow{R^{1}} C \xrightarrow{R^{1}} C$$

$$R^{3} \xrightarrow{R} O \xrightarrow{R^{1}} C \xrightarrow{R^{1}} C \xrightarrow{R^{1}} C$$

$$R^{3} \xrightarrow{R^{1}} C \xrightarrow{R^{1}} C \xrightarrow{R^{1}} C$$

$$R^{2} \xrightarrow{R^{1}} C \xrightarrow{R^{1}} C$$

$$R^{3} \xrightarrow{R^{1}} C \xrightarrow{R^{1}} C$$

$$R^{4} \xrightarrow{R^{1}} C$$

$$R^{2} \xrightarrow{R^{1}} C$$

$$R^{3} \xrightarrow{R^{1}} C$$

$$R^{4} \xrightarrow{R^{1}} C$$

$$R^{2} \xrightarrow{R^{1}} C$$

wherein each R is independently selected from the group consisting of alkyl radicals, substituted alkyl radicals, cycloalkyl radicals, substituted cycloalkyl radicals, aryl radicals and substituted aryl radicals, each R¹ is independently selected from the group consisting of divalent hydrocarbon radicals and substituted divalent hydrocarbon radicals, each R² is independently selected from the group consisting of aryl radicals and substituted aryl radicals, each R³ is independently selected from the group consisting of monovalent hydrocarbon radicals having a carbon-carbon multiple bond and substituted hydrocarbon radicals having a carbon-carbon multiple bond, x is an integer in a range of 0 to about 500, and y is an integer in a range of about 6 to about 500.

11. (currently amended) A composition comprising:

a silicone polymer; and

a silicone reinforcer present in an amount effective to reinforce said polymer, the silica reinforcer including at least <u>one</u> aryl group effective to increase the refractive index of the silica reinforcer relative to a similar silica reinforcer without at least one aryl group.

wherein the silicone polymer includes at least one polysiloxane of the formula:

$$\begin{array}{c|c}
R^{2} \\
\downarrow \\
R^{3} \\
\downarrow \\
R \\
\downarrow \\
R \\
\downarrow \\
R^{2}
\end{array}$$

$$\begin{array}{c|c}
R^{2} \\
\downarrow \\
\downarrow \\
R \\
\downarrow \\
R \\
\downarrow \\
R^{2}
\end{array}$$

wherein each R is independently selected from the group consisting of alkyl radicals, substituted alkyl radicals, cycloalkyl radicals, substituted cycloalkyl radicals, aryl radicals and substituted

hydrocarbon radicals and substituted divalent hydrocarbon radicals, each R² is independently selected from the group consisting of aryl radicals and substituted aryl radicals, each R³ is independently selected from the group consisting of monovalent hydrocarbon radicals having a carbon-carbon multiple bond and substituted hydrocarbon radicals having a carbon-carbon multiple bond, x is an integer in a range of 0 to about 500, and y is an integer in a range of about 6 to about 500.

- 12. (original) The composition of claim 11 wherein the silicon polymer includes aryl groups.
- 13. (original) The composition of claim 11 wherein the silicone polymer is a crosslinked polysiloxane.
- 14. (original) The composition of claim 11 wherein the silica reinforcer has a refractive index of about 1.46 or higher.
- 15. (original) The composition of claim 11 wherein the silicone polymer is a crosslinked copolymer of (1) at least one polysiloxane including aryl groups and (2) at least one crosslinker component.
- 16. (canceled)
- 17. (original) The composition of claim 11 wherein said aryl groups are selected from the class consisting of phenyl, substituted phenyl groups, styryl, substituted styryl groups and mixtures thereof.
- 18. (original) The composition of claim 11 wherein the silica reinforcer includes covalently bonded silicon-containing moieties including at least one aryl group.
- 19. (currently amended) The composition of claim [[11]] 18 wherein the moeities include 1 to 3 aryl groups per silicone atom.
- 20. (canceled)
- 21. (currently amended) A polysiloxane compound having the following formula:

wherein each R is independently selected from the group consisting of alkyl radicals, substituted alkyl radicals, cycloalkyl radicals, substituted cycloalkyl radicals, aryl radicals and substituted aryl radicals, each R¹ is independently selected from the group consisting of divalent hydrocarbon radicals and substituted divalent hydrocarbon radicals, each R² is independently selected from the group consisting of aryl radicals and substituted aryl radicals, each R³ is independently selected from the group consisting of monovalent hydrocarbon radicals having a carbon-carbon multiple bond and substituted hydrocarbon radicals having a carbon-carbon multiple bond, x is an integer in a range of 0 to about 500, and y is an integer in a range of about 6 to about 500.

- 22. (original) The compound of claim 21, wherein each -R¹-R² is independently selected from the group consisting of styryl and substituted styryl radicals.
- 23. (original) The compound of claim 21, wherein x/y is less than about 4.
- 24. (original) The compound of claim 21, wherein each R is methyl.
- 25. (original) The compound of claim 21, wherein each R¹ is independently selected from the group consisting of ethylene radical and methylene radical.
- 26. (original) The compound of claim 21, wherein each R^2 is phenyl.
- 27. (original) The compound of claim 21, wherein each R^3 is vinyl.
